PROFESSIONAL PROFILE

Computer Engineering graduate and student of the Double Master's Degree in Computer Engineering and Applied Artificial Intelligence, interested in developing innovative technological solutions, especially in the field of Artificial Intelligence. Focused on designing and developing intelligent systems capable of solving real-world problems and generating positive impact. Motivated by continuous learning, professional growth, and the development of software solutions, with experience in business environments and software development teams.

EDUCATION

- 09/2026 - Present
Double Master's Degree in Computer Engineering and Applied Artificial Intelligence
University Charles III of Madrid
- 09/2022 - 07/2026
Bachelor's Degree in Computer Engineering
University Charles III of Madrid

TECHNICAL SKILLS

- Programming Languages: Python, C/C++, JavaScript, Kotlin
- Backend and Software Services: Flask, Express.js, REST APIs
- Web Development and Frontend: React, Vite, HTML/CSS
- Communication and Distributed Systems: Socket.IO, Eclipse Mosquitto
- Databases: MariaDB, PL/SQL, MongoDB, Cassandra
- Artificial Intelligence and Data Science: TensorFlow, OpenCV, MediaPipe, Scikit-Learn, NumPy, Pandas, Matplotlib
- Infrastructure and Deployment: Docker
- Version Control: Git, GitHub
- Data Analysis: Microsoft Excel

LANGUAGES

Spanish: Native language
English: B2 Level, Cambridge English First (FCE)

INTERESTS

CJudo Black Belt, 1st DAN (Royal Spanish Judo Federation)

WORK EXPERIENCE

- 10/2025 - Present
Web Development & QA Testing | Content Trip Solutions, S.L. (Smartvel)
- Development and maintenance of web interfaces and components.
 - Participation in quality assurance processes, frontend and backend testing, and functionality validation.
 - Collaboration with software development teams in the continuous improvement of software products.

CORE COMPETENCIES

- Development of scalable end-to-end software solutions, participating in advanced technological projects.
- Knowledge of Artificial Intelligence, Machine Learning, Computer Vision, and Data Science.
- Design of web applications, software services, communication networks, and distributed systems.
- Management, maintenance, and optimization of relational and non-relational databases.
- Experience working in software development teams and projects, using version control systems and agile methodologies.

OUTSTANDING PROJECTS

- AletheIA: Deepfake Detection System based on Digital Forensics, Machine Learning and XAI — Bachelor's Thesis**
- Development of an intelligent system for detecting facial manipulations in images, combining computer vision techniques and machine learning.
 - Integration of Explainable Artificial Intelligence mechanisms to improve transparency, interpretability, and trust in model decisions.
 - Design of a solution aimed at real-world digital content verification scenarios.
- MyHomie! Interactive System Development through Design Thinking**
- Development of a smart home application with device connectivity support.
 - Implementation of gesture recognition through mobile devices and voice command interaction.
